Security that fits the business you run

Defined work, useful outcomes and a budget you can plan around. Your team stays focused on running the business.

Security health check

1–25 users, up to 2 business-critical applications | €950 - €1,800

We review your essential business accounts, email safeguards, backup arrangements and the two applications that would hurt most if exposed. You receive a prioritized list of changes with owners and a short review meeting.

You receive: Account and email baseline; application exposure review; backup checks; prioritized 30-day action plan.

Business protection baseline

Up to 75 users; identity, email, cloud and backup review | €2,400 - €4,800

Your business relies on email, cloud identity and access to shared information. We examine permissions, administrator roles, devices and backups, then help your IT contact establish a reliable security baseline.

You receive: Identity and email configuration review; cloud and backup actions; documented safeguards and handover.

Continuity and incident readiness

One business-critical service; one tabletop and backup restoration review | €1,800 - €3,600

We identify the service that must return first, test the readiness of its backups, and rehearse the first decisions your team would face during an outage or attack.

You receive: Continuity priorities; one recovery exercise; incident contacts; step-by-step recovery notes.

Awareness workshop

One practical session for up to 25 staff | €750 - €1,500

Your staff practise decisions they encounter at work: suspicious invoices, account takeovers, sensitive records and reporting. The workshop ends with useful actions rather than an awareness certificate.

You receive: One workshop for up to 25 participants; exercises; knowledge check; practical follow-up.
